ABOUT

As a FullstackDeveloper, I am well versed in the clientside technologies, HTML, CSS, and JavaScript. My markup is always semantic and accessible. I know all the ins and outs of CSS, and can build almost any design. For largescale applications, I prefer to use the SASS pre-processor to keep my CSS modular and maintainable and I also use PostCSS for some extra features. I can build powerful Progressive Web Applications using plain JavaScript. When a framework is needed, my preference is React. Having worked with Back-End developers building applications, I am very familiar with how REST APIs/GraphQL work, and can even navigate my way around any server-side application
